

# Tax

You are here: [Home](#) / [Microservices](#) / [Tax](#)

This page gives an overview of the **Tax** microservice for the **Skava Commerce** platform.

## Overview

The **Tax** microservice ("Tax") facilitates the computation of taxes on items and shipping. Computation is usually handled by the tax service provider that can be integrated with Skava Commerce. In case of a failure in the third-party tax service, the system will fall back on the default tax payment processing. In the default tax processing, the store has the option to choose between a flat rate of tax (e.g. \$2) or a flat percentage (e.g. 2%) and tax will be computed accordingly.

## Core Features

- Flexible rules to use your own tax provider for the right geography
- Tax exclusions on a per-SKU basis to ensure compliance
- Built-in integration to speed up deployment
- Change tax providers easily when needed
- Choose between a flat rate of tax or a flat percentage in the default tax processing and tax will be computed accordingly
